# **Econometrics Replication**

### Xuyuan Zhang<sup>1</sup>†

<sup>1</sup>Department of Economics, University of Michigan, Ann Arbor, USA.

#### 1. Introduction

Previous literature has consistently shown that adult education programs play a key role in reducing poverty rates in various regions (Oxenham 2002; Ortega & Rodríguez 2008), but previous designs suffer from irrelevance to daily work and high dropout rates. smart phone coverage has been recent spotlight.

The widespread of mobile phone service has been a significant factor to explain the reduction in grain price dispersion, which has been demonstrated by (Aker 2010)

Mobile phone technology could also affect returns to education by allowing households to use the technology for other purposes, such as obtaining price and labor market information, and facilitating informal private transfers (Aker and Mbiti 2010).

The return of (Gonzalez & Maffioli 2024) Gonzalez (2021)

#### 1.1. Experiment Design

Randomized controlled trials (RCT) has been widely used in economic design. This study use

#### 2. Main Result

3.
